

Poodle Club of Canada

Health Registry

Poodles, like all breeds, have health problems. We, at the Poodle Club of Canada, strongly urge our members to health test their dogs. When considering the purchase of a Poodle, or use of a stud dog, it is useful to obtain as much health information as possible - including information on its ancestors, siblings and offspring. We have decided to include this information in our yearbook, to use as a reference. Those members who have submitted their Health testing for public verification exhibit the highest level of breeder ethics and are to be congratulated.

Inclusion in this section is open to all Poodles owned or bred by a club member. Submission of information in all health categories was not required (or expected - differences in varieties). When reviewing entries do not make assumptions about why some categories may have been omitted - we only accepted health tests for the years 2001 and 2002), testing done in previous years was not accepted. The age and breeding status of a dog may also have some influence on the number of categories in which tests were performed. Also, not all members have full access to a complete range of specialists.

Interpreting the Information

Dogs are listed alphabetically by registered name. The first line is the dog's registered name followed by either M (male) or F (female). The second line shows the sire and dam. The third line lists variety, color, and date of birth. The fourth line lists the owner and breeder, The fifth and sixth lines list test results.

Possible test results are:

Hips Miniature and Standard Poodles - Specialist category requiring submission of an OVC, OFA, Penn Hip Report or certificate from another registering body

Eyes All Poodles

Normal - an ACVO examination form with both eyes marked Normal

Condition - an ACVO examination form without both eyes marked Normal

* - a condition not known to be harmful to the breed

SA (sebaceous adenitis) - Standard Poodles (usually) - consists of a written evaluation from a Veterinary Histopathologist

VwD (von willebrand's disease) - Miniature and Standard Poodles - Blood or DNA results from a qualified lab marked Normal

Patellas - Toy and Miniature Poodles - both knees were found to be free of luxation when checked by a vet

Addison's Disease - Standard Poodles - blood test results show a normal range, from a qualified lab

Thyroid -All Poodles - blood test results show a normal range, from a qualified lab

NOTE: Hip Certification, patellas and DNA tests are lifetime - all other conditions must be retested.

Miniature Poodles

Name: Ch.Bonheur Copy Right		Sex: Male	
Sire: Bonheur Photocopy		Dam: Bonheur Simply The Best	
Variety: Miniature	Colour: Red	Birthdate: August 29, 1995
